This invention describes a method for conferring disease resistance in plants. The invention describes the use of novel genes and proteins belonging to the Oryza longistaminata and Oryza sativa receptor kinase-like protein (RRK) Xa21 multigene family. Such genes and proteins canssava, maize and tomato are also described. The genes and proteins can be used for enhancing resistance to Xanthomonas in a plant, preferably in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PT useful for conferring resistance to Xanthomonas in rice and tomatoes ps Example 4; Page 33; 47pp; English.

CDNA clones TRK1 (T31307) and TRL1 (T31308) were isolated from the country of tomato conditions of the RRK conditions of tomato conditions of the RRK conditions of disease resistance genes. TRK1 (tomato receptor kinase 1) is present as 1 or 2 copies in the tomato genome and 1 copy maps to the short arm of chromosome 1 in the proximity of a resistance gene to Xanthomonas campestris pv. vesicatoria RX1. It encodes an RKK contradiction pathways leading to a defence response. The gene is consecuted for engineering disease resistance in tomato and other plants.                                                                                            2252
                                                                                                                                                      2195
                                                                                                                                                                                                                 2135
                                                                                                                                                                                                                                                                                                                                                                                              plants. The invention describes the use of novel genes and proteins belonging to the Oryza longistaminata and Oryza sativa receptor kinase-ilke protein (RRK) Xa21 multigene family. Such genes from cassava, maize and tomato are also described. The genes and protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        generating transgenic plants resistant

                                            DNA encoding plant morphogenesis regulatory protein - useful yield plants with short stems or altered inflorescence Claim 1; Pages 6-10; 17pp; Japanese.

The present sequence encodes an Arabidopsis thaliana plant morphogenesis regulatory protein (MRP), which can be used to a plant with, e.g. short stems or altered inflorescence. The acts on a plant at a specific site for a specific period, and therefore be used to regulate extraneous gene expression in a plant. The MRP's cDNA or genomic DNA can be used to transform
                                                                                                                                                                                                                                                                                                       Z4-AUG-1995; JP-216187.

type and class II type to produce recombinant plants
Disclosure; Fig 2; 20pp; Japanese
The present sequence represents a class I S-receptor kinase
gene. The sequence was isolated from Brassica cammestris S45
Sequence 2640 BP; 800 A; 491 C; 645 G; 704 T;

These genes are transcribed specifically in pistils and anthers and are involved in the stigmattic self-incompatibility (SI) response of Brassica. The protein products of these genes are thought to be the primary transmitters of the pollen recognition signal in the SI response. The SRK proteins comprise an S-locus binding domain, a transmembrane domain and a protein kinase domain. The S-locus binding domain is pref. substantially knowledges to an S-locus glycoprotein (SLG) gene. The kinase domain has a degree of homology with the kinase domain of SRK6, SRK2, and ZMPK1.
                                                                                    Brassica

CDNA clone SRK-ALO (T13425) codes for an S locus receptor kinase associated with the ALO self-incompatability allele of Brassica napus. It was isolated from genomic DNA of rapeseed line WI by PCR amplification. The gene contains a 1 bp deletion resulting premature termination of translation and prodn. of truncated SRK protein. Expression vectors contg. a corrected SRK-ALO gene (se produce hybrid seed in improved yields. Sequence 2685 Bp; 816 A; 512 C; 639 G; 718 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1624

Patent No. 5977434

GENERAL INFORMATION:

APPLICANT: Wang, Guo-Liang
APPLICANT: Wang, Guo-Liang
APPLICANT: Scabo, Veronique
TITIE OF INVENTION: Disease Resistance in Plants
TOTIES OF INVENTION: Disease Resistance in Plants
CORRESPONDENCE ADDRESS:

CORRESPONDENCE TOWNSEND And Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
COUNTRY: USA
COMPUTER READABLE FORM:
MEDIUM TIPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-TOS/MS-POS
SOFTWARE: Patenth Release #1.0, Version #1.30
CURRENT APPLICATION NUMBER: US 08/373,375
FILING DATE: 17-JAN-1996
CLASSIFICATION DATA:
APPLICATION NUMBER: US 08/373,375
FILING DATE: 07-JUN-1995
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 08/475,891
FILING DATE: 07-JUN-1995

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         314 286 1810
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    first-strand synthesis primer was used. An 'anchor' first-strand synthesis primer was used. An 'anchor' nucleotide (V-A,C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAGAGAGAGAGACTAGTCTCGAG(T)]BV] to anchor the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned pfu DNA polymerase, ligated to EcoRI adapters and subsequently phosphorylated. The xhoI site within the first-strand synthesis primer was then restricted by digestion with XhoI; all XhoI sites in the cDNA constructs were size-fractionated with a 500bp cutoff, using GibcoBRL Life Technologies' cDNA size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript II XR Predigested weth EcoRI and XhoI, and phosporylated by Stratagene). Both the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n-25). This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note="Vector: pBluescript II XR; Site_1: EcoRI; Site_2: /note="Vector: pBluescript II XR; Site_1: EcoRI; Site_2: XhOI; The mRNA was isolated from roots of Glycine max 'Supernod' plants generously donated by Dr. Gary Stacey. The seedlings were innoculated with Bradyrhizobium japonicus, strain USDA110 priot to harvest. Stratagene's CDNA synthesis Kit (catalog number 200401) was used to synthesis the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /clone="GENOME SYSTEMS CLONE ID: Gm-c1028-1713"
